U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE PUBLIC HEALTH SERVICE  
DATE OF RELEASE: SEPTEMBER 12, 1975 - ATLANTA, GEORGIA 30333

## WEEKLY REPORT

For  
Week Ending  
September 6, 1975

### EPIDEMIOLOGIC NOTES AND REPORTS FATAL HUMAN PLAGUE - New Mexico

On August 25, 1975, a 14-year-old boy from California had onset of fever, headache, backache, and anorexia while visiting relatives in New Mexico. On August 27 he complained of periodic shortness of breath but did not have a cough.

He was taken to a physician in Albuquerque on August 28, where examination revealed a temperature of 103°F (39.4°C), pharyngitis, a positive urine icotest, and a white blood cell count of 5100/mm<sup>3</sup>; no palpable adenopathy was noted. The physician made a presumptive diagnosis of early viral hepatitis and urged the parents to consult the child's physician on the next day. The boy and his parents then traveled by car to California and arrived at their home in Marin County on August 29.

### CONTENTS

Epidemiologic Notes and Reports	
Fatal Human Plague - New Mexico	305
Bacillus cereus Food Poisoning - Wisconsin	306
Current Trends	
Follow-Up on St. Louis Encephalitis - United States	311
International Notes	
Quarantine Measures	311

The boy was seen by a physician on August 29 but was not hospitalized. However, on August 31, he was hospitalized in Marin County with cough, respiratory distress, and cyanosis. A chest X-ray revealed multiple bilateral pulmonary

## PLAQUE - Continued

infiltrates. He was intubated and given ampicillin, gentamicin, and cephalothin. Shortly thereafter, streptomycin was substituted for gentamicin. Early on September 1 he was transferred to a hospital in San Francisco, where he died several hours after admission. Postmortem examination revealed bilateral pneumonia; no lymphadenopathy was detected on gross examination. Throat, sputum, blood, and endotracheal aspirate cultures yielded gram-negative rods identified as *Yersinia pestis* by the Laboratory Division of the California State Health Department.

The boy spent the summer with relatives in a rural area of Bernalillo County, New Mexico. The patient had reportedly had contact with wild rodents during his visit and was exposed to dogs and cats that had contact with rodents. A skin lesion suggestive of an insect bite had been noted on the patient's wrist before onset of illness.

Approximately 130 household and hospital contacts of the patient have been placed under surveillance by health authorities in Marin and San Francisco counties in California and Bernalillo County, New Mexico. Prophylactic tetracycline 1 gm/day orally in divided doses for 6-10 days was recommended for persons considered to be at high risk. As of September 9, no contacts had developed pneumonic plague. A field investigation has been conducted, and the results of animal trapping activities are pending. To kill fleas on rodents, insecticide-containing bait stations have been placed in the area where the boy apparently acquired his infection.

This is the seventh human plague infection acquired in Bernalillo County since January 1969. The current case apparently acquired his infection in an area that is less than 10 miles from a site where 2 individuals acquired plague in 1970 (MMWR, Vol. 19, No. 37).

**BACILLUS CEREUS FOOD POISONING - Wisconsin**

On July 28, 1975, a family of 4 purchased a meal at a fast food restaurant in Sheboygan, Wisconsin. The meal consisted of fried chicken, roll and butter, and mashed potatoes and gravy. The father ate all of the food items at 5:30 p.m. and became ill at 8:30 p.m. with diarrhea and abdominal cramps. A daughter also consumed all of the food items and became ill at 3:00 a.m. the following morning with vomiting, diarrhea, and malaise. The mother and son consumed just the chicken and roll with butter, and neither became ill. Symptoms for the affected individuals lasted approximately 1 day.

Fried chicken and mashed potatoes purchased by the family on July 28 and mashed potatoes and gravy obtained from the restaurant the following day by the Sheboygan Health Department were submitted to the Wisconsin State Laboratory of Hygiene in Madison for testing. One stool specimen obtained from the father was also submitted for analysis.

No foodborne bacterial pathogens were isolated from the fried chicken, the gravy, or the mashed potatoes collected the day after the incident. However, the mashed potatoes from the suspect meal contained  $1.8 \times 10^7$  *Bacillus cereus* per gram with no other bacterial pathogens isolated. The stool specimen was negative for *B. cereus*. Three isolates of *B. cereus* obtained from the mashed potatoes were submitted to the Food Research Institute in Madison for enterotoxin testing. All 3 isolates produced strong positive reactions in the rabbit ileal loop and skin permeability tests.

(Reported by Royce J Truex, MD, Allan H Margolin, MD, J Donald Hill, MD, Harvey J Tucker, MD, Attending Physicians; Calvin Plumhof, MD, Pathologist, Marin Medical Laboratory; Jack Streit, MD, Senior Resident in Pathology, Presbyterian Hospital; Carolyn B Albrecht, MD, Marin County Health Officer; Selma K Dritz, MD, Assistant Director, Bureau of Disease Control and Adult Health, San Francisco City-County Health Department; Mrs. Genevieve Nygaard, Microbiology Supervisor, S Benson Werner, MD, Medical Epidemiologist, California State Department of Health; Rochelle Licht, Public Health Nurse, Bernalillo County; Eva Wallen, MD, District Health Officer, Neil Weber, Program Manager, Insect and Rodent Control Section, Bryan Miller, Chief, General Sanitation Division, Environmental Improvement Agency, Victor M Zalma, MD, Director, State Health Agency, New Mexico Health and Social Services Department; Plague Branch, Vector-borne Diseases Division, Bureau of Laboratories, CDC; and an EIS Officer.)

## Editorial Note

Since the lymphadenopathy characteristic of bubonic plague was not documented clinically or at autopsy, this case should probably be categorized as septicemic plague with secondary plague pneumonia. Of 13 cases of human plague reported in 1975 (current case included), 2 patients have had well-documented pneumonia.

Patients with plague pneumonia (and viable *Y. pestis* in their sputum) are of utmost concern to health authorities, since they may transmit the organism to close contacts. Pneumonic plague (acquired via the respiratory route) is a fulminant disease with a high mortality rate. The prompt institution of surveillance measures and tetracycline prophylaxis may have prevented cases of pneumonic plague among contacts of this case.

**BACILLUS CEREUS FOOD POISONING - Wisconsin**

The Sheboygan health officer determined that the food establishment in question prepared its gravy with boiling water and stock material and its mashed potatoes from a dehydrated canned product. The day after the incident all gravy and mashed potatoes at the serving counter were found to be kept at 150°F (65.5°C).

The attack rates, incubation periods, symptoms, duration of illness, high numbers of *B. cereus*, and confirmation of enterotoxin production in the isolate implicate *B. cereus* in this food poisoning incident.

(Reported by John W Yrios, Food and Nosocomial Infections, Wisconsin State Laboratory of Hygiene; John M Goepfert, PhD, Food Research Institute, Madison; Hugh Grant Skinner, MD, State Epidemiologist, Wisconsin Department of Health and Social Services; Solomon Belinky, Public Health Director, Sheboygan City Health Dept.)

## Editorial Note

The source of the *Bacillus cereus* for the mashed potatoes in this outbreak is unknown. Although the temperature at which the gravy and mashed potatoes were kept was adequate when measured, whether it varied below 150°F is unknown.

Of 127 foodborne outbreaks of known etiology reported to CDC in 1973, only 1 (involving 4 persons) was caused by *B. cereus*.

†Delayed report for week ending Sept. 6, 1975

**CURRENT TRENDS**  
**FOLLOW-UP ON ST. LOUIS ENCEPHALITIS — United States**

Through September 5, 1975, a total of 139 confirmed cases of St. Louis encephalitis virus infection had been reported from 14 states. An additional 206 cases with some serologic evidence of infection (the majority by single positive antibody titers) have also been reported (Table 1).

Table 1

**States with Confirmed or Seropositive Cases  
of SLE Virus Infection, September 5, 1975**

State	Cases		Total
	Confirmed*	Some Serologic Evidence	
Alabama	4	3	7
Arkansas	1	3	4
Georgia	1	0	1
Illinois	24	105	129
Indiana	9	1	10
Kentucky	6	0	6
Louisiana	1	3	4
Mississippi	65	63	128
Missouri	3	2	5
New Jersey	2	0	2
North Dakota	7	4	11
Ohio	4	3	7
Tennessee	7	5	12
Texas	5	14	19
Total	139	206	345

\*By serology (138) or by virus isolation (1)

**INTERNATIONAL NOTES  
QUARANTINE MEASURES**

The following change should be made in the listing of U.S. Designated Yellow Fever Vaccination Centers included in the "Supplement — Health Information for International Travel," MMWR, Vol. 23, September 1974:

**ALABAMA — Birmingham**  
 Jefferson County Department of Health  
 Phone: 933-9110 ext 257

**ALABAMA — Montgomery**  
 State Department of Health  
 Phone: 832-3200

**ARIZONA — Tucson**  
 Pima County Health Department  
 Add to hours: By appointment

**CALIFORNIA — Hollywood**  
 Medical Clinic for Immunization  
 Hours: By appointment  
 Mon-Fri, 4-5 pm; Tues-Wed, 10-11 am

**CALIFORNIA — Palo Alto**  
 Palo Alto Medical Clinic  
 Hours: Tues & Wed, 11 am-12 noon;  
 Sat, 9-10 am

**CALIFORNIA — Sacramento**  
 New name and address:  
 South City Health Center  
 County Health Department  
 7222 24th St 95822

Hours: By appointment Mon-Fri, 2 pm

**DELAWARE — Wilmington**  
 Hercules Inc, Medical Department  
 Hours: second and third Fri, each month

**DISTRICT OF COLUMBIA — Washington**  
 Freedmen's Hospital  
 Sixth and Bryant Streets, NW 20001  
 New name and address: Howard University Hospital, 2041 Georgia Ave,  
 NW, Room SC49, 20001  
 Phone: 202-745-6625  
 Hours: By appointment Tues, 1-5 pm

**IDAHO — Caldwell**  
 Southwest District Health Department  
 Hours: Tues, 8 am-12 noon; 1-5 pm

**ILLINOIS — Peoria**  
 City-County Health Department 61604  
 New name: City Health Department

**INDIANA — Elkhart**  
 County Health Unit  
 Address: 315 South Second St 46514  
 Phone: 219-294-1688 ext 261

**MAINE — Portland**  
 US Public Health Service Outpatient Clinic  
 Hours: Fri, 10-11 am

**MASSACHUSETTS — Boston**  
 US Public Health Service Hospital  
 Hours: Mon & Wed, 3-4 pm

## QUARANTINE MEASURES - Continued

**MISSOURI - Kansas City**

Trans-World Airlines, Inc

Address: PO Box 20007, 64195

**NEVADA - Reno**

Washoe County District Health Dept

Hours: By appointment Tues, 3:30 pm

**NEW YORK - Jamaica**

American Airlines Medical Dept

Add to clinic hours: By appointment

**NORTH CAROLINA - Durham**

Duke University Medical Center

Hours: Thurs, 3:30-4:30 pm

**NORTH DAKOTA - Fargo**

City Health Department

New name: City Community Health Center

Address: 401 Third Ave North 58102

Hours: Tues, 1:30-2:30 pm

**OHIO - Canton**

City Health Department

Hours: Fri, 10:15-11:15 am

**OHIO - Columbus**

Family Medicine Clinic

Phone: 614-422-1590

Hours: By appointment, Mon &amp; Thurs, 5-6 pm

**OKLAHOMA - Stillwater**

Student Hospital and Clinic

Oklahoma State University

New name: Oklahoma State University Hospital

Phone ext: 359

The Morbidity and Mortality Weekly Report, circulation 45,000, is published by the Center for Disease Control, Atlanta, Ga.

Director, Center for Disease Control  
Director, Bureau of Epidemiology, CDC  
Editor, MMWR  
Managing Editor, MMWR

David J. Sencer, M.D.  
Philip S. Brachman, M.D.  
Michael B. Gregg, M.D.  
Katherine A. Sheram, M.A.

The data in this report are provisional, based on weekly telegraphs to CDC by state health departments. The reporting week concludes at close of business on Friday; compiled data on a national basis are officially released to the public on the succeeding Friday.

In addition to the established procedures for reporting morbidity and mortality, the editor welcomes accounts of interesting cases, outbreaks, environmental hazards, or other public health problems of current interest to health officials.

## Send reports to:

Center for Disease Control  
Attn: Editor, Morbidity and Mortality Weekly Report  
Atlanta, Georgia 30333

## Send mailing list additions, deletions, and address changes to:

Center for Disease Control  
Attn: Distribution Services, GSO, 1-SB40  
Atlanta, Georgia 30333

When requesting changes, be sure to give your former address, including zip code and mailing list code number, or send an old address label.

DHEW Publication No. (CDC) 76-8017
